

Procedure involving business partners

The start is an instruction send by us normally via e-mail. This triggers a process, where the procedure to follow is dependent on certain particulars of the case. So I have created a form where I want to start the Form just via a link to then upload this instruction. Once started, my business partner should be notified so that he or they know there is something to pick up.

I want to test starting a Snap Form as a Standard User and as an External User. The SnapForm is assigned to a User group including my business partner and their User, as well as myself. All Users of this group should be able to reassign.

The screenshot shows a web application interface with a table of user groups. The browser address bar shows 'acc.bzctrl.com/app/#/groups'. The application has a sidebar with icons for 'Organise', 'Groups', and 'Users'. The main content area has a search bar and a table with columns: Avatar, Name, Description, Domain, and Action. There are two rows in the table, both for 'Eaton Electric SA PTY Ltd'.

Avatar	Name	Description	Domain	Action
	Combined External and Internal group		Eaton Electric SA PTY Ltd	  
	External User Group		Eaton Electric SA PTY Ltd
