

Customer calls for an api to to Customs Product and Measures data

The Customs calls for an api providing a:

1. 10 digit commodity code; and
2. an Origin.

The result should be a link to a Page that displays the data related to the Commodity code in terms of wording and the applicable Measures on the basis of the combination Commodity code + Origin. The Measures should provide for the conditions either showing directly or a hyperlink allowing the User to access the information in relation to the applicable Measures.

The Country of Origin can be a specific country, but can also be part of a Geographical area group. It should show the Measures based on both.
