

Taric Settings

Introduction

As explained, we have two level regarding the Customs Product database:

- 1. The Taric commodity code, which is the classification of Products from an EU Customs point of view; and
- 2. The Product by Trade name, belonging to a Taric commodity code (always one).

Taric Services > Customs Products Database	
^ Taric code: 2710194229	Excise Controlled Definitive countervailing duty(554)/C496
Commercial description	Legal description
ULSD	Other Gas oils with a sulphur content not e
Diesel 10ppm	Other Gas oils with a sulphur content not e

On both levels it should be possible to apply settings. This part is about the Settings on the Taric commodity code level called "Taric Settings".

Taric Settings

Under the Taric Settings Page it first should be clear to the User, which Settings is he looking at, belonging to which Taric code? This means the Taric code selected should be mentioned including the Description.

Taric code
2710194229

Description English

MINERAL FUELS, MINERAL OILS AND PRODUCTS OF THEIR DISTILLATION; BITUMINOUS SUBSTANCES; MINERAL WAXES ; Petroleum oils and oils obtained from bituminous minerals, other than crude; preparations not elsewhere specified or included, containing by weight 70% or more of petroleum oils or of oils obtained from bituminous minerals, these oils being the basic constituents of the preparations; waste oils ; Petroleum oils and oils obtained from bituminous minerals (other than crude) and preparations not elsewhere specified or included, containing by weight 70% or more of petroleum oils or of oils obtained from bituminous minerals, these oils being the basic constituents of the preparations, other than those containing biodiesel and other than waste oils ; Other mineral oils ; Gas oils ; For other purposes ; With a sulphur content not exceeding 0,001% by weight ; Having a bio-based carbon content of at least 80% by weight ; Paraffinic gasoil obtained from synthesis and/or hydro-treatment, of non-fossil origin, in pure form; blends containing by weight more than 20% of paraffinic gasoil obtained from synthesis and/or hydro-treatment, of non-fossil origin ; Other

Done

Secondly, it should be clear since when the company has registered this Taric code. In the event this Taric code is no longer relevant the User should be able to set an end date. This is both for information purposes and for the purpose of retrieving data from the Taric Service, where the Taric service would only provide data for 'active' Taric codes. If the mechanism currently does not take into account an 'active status', meaning the data will still be populated, this is fine. The main purpose is for information purposes to a company.

Thus far the informational and organisational settings. Then comes the functional settings part.

EU Settings

The functional settings relate to the Measures that are applicable to a certain Taric commodity code. Per Taric code the User should be able to register default settings per Measure under a Header "EU Settings". That means that:

1. First the User should be able select a Measure from a List of Measures;
2. This list should show only the Measures applicable to the Taric code of the Taric Settings page the User is on. It should show only the Measures relevant for EU;
3. The Measures should show by Measure, meaning that if a Measure is included multiple times, because for example the Measure applies for multiple Geographical areas, it should show only once.

The current setup shows the data incorrectly:

EU Setting			
☐	Geographical Area	Measure Type	Conditions
☐	ERGA OMNES (1011)	VAT (NLBTW)	View Condition
☐	ERGA OMNES (1011)	Stock tax (NLACVH)	View Condition
☐	ERGA OMNES (1011)	Excise (NLACC)	View Condition

Taric Setting - EU settings, Improvements needed

1. First column should show Measure Type. Geographical Area can be removed from the list;
2. Currently it shows the National (Dutch) Measure Types, should be the EU Measure Types which are more. Please note the specification that each Measure type only shows once;
3. Instead of being able to "View Conditions", the user should be able to open a dropdown showing a list of the conditions and be able to select and save a condition. For example:

142 : Tariff preference

Valid From: 1972-01-01

Geographical area: KE

Certificate	Type Of Document	Description EN	Description NL
N954	UN/EDIFACT certificates	Movement certificate EUR.1	Certificaat inzake goederenverkeer EUR. 1
N864	UN/EDIFACT certificates	Preference certificate of origin (declaration of preferential origin on the invoice; EUR.2)	Preferentieel oorsprongscertificaat (verklaring van preferentiële oorsprong de factuur; EUR2)
U162	Proofs of origin	Invoice declaration or origin declaration made out on invoice by any exporter or any other commercial document neither in the framework of GSP nor EUR-MED for a total value of originating products not exceeding 6000 EUR	Factuurverklaring of oorsprongsverklaring van de exporteur op een factuur of een ander handelsdocument, buiten het APS en evenmin in het EUR-MED-kader waarbij de totale waarde van de producten van oorsprong niet hoger is dan 6 000 EUR
No document provided			

These are the conditions applicable. The user should be able to select the top one and Save. As a Result the Table should show the value N954 next to the Measure Type under which it was stored (in the example 142 Tariff preference). Please note that the list of conditions to select from should show all conditions belonging to the Measure Type, regardless of the Geographical area. So it should show all possibilities, each possibility only once. So let's say the Measure Type 142 Tariff Preference has a condition N954 when taking into account geographical area Kenya, but when taking into account the UK the condition is U116, the conditions list should show both. If both Kenya and the UK would have a same option, say XXX, it should only show the condition XXX once.

Member State settings

Same principle should apply to the Member State settings, only showing the Measure Types relevant to the Member State. Currently it is the other way around and it is showing the EU Measure types:

Member State Setting

☐	Geographical Area	Measure Type	Conditions
☐	Kenya (KE)	Tariff preference (142)	View Condition
☐	Israel (IL)	Tariff preference (142)	View Condition
☐	Ivory Coast (CI)	Tariff preference (142)	View Condition
☐	Ukraine (UA)	Import control (760)	View Condition
☐	Ukraine (UA)	Import control (762)	View Condition
☐	United Kingdom (GB)	Tariff preference (142)	View Condition
☐	Solomon Islands (SB)	Tariff preference (142)	View Condition
☐	Singapore (SG)	Tariff preference (142)	View Condition
☐	Western Sahara (EH)	Tariff preference (142)	View Condition
☐	GSP - General arrangements (2020)	Tariff preference (142)	View Condition
☐	Samoa (WS)	Tariff preference (142)	View Condition
☐	Ghana (GH)	Tariff preference (142)	View Condition
☐	Ecuador (EC)	Tariff preference (142)	View Condition
☐	SADC EPA (1035)	Tariff preference (142)	View Condition
☐	South Africa (ZA)	Tariff preference (142)	View Condition
☐	Mexico (MX)	Tariff preference (142)	View Condition
☐	Moldova, Republic of (MD)	Tariff preference (142)	View Condition
☐	Cameroon (CM)	Tariff preference (142)	View Condition
