

Bill of Discharge

For Inward Processing the discharge of the procedure is always by means of a Customs warehouse declaration. Each Inward Processing declaration is monitored via the Bill of discharge screen where the Product declared for Inward Processing is matched with the same Parcel(s) being, subsequently, declared for Customs warehouse. As it can very well be that T2 Products are used in an Inward Processing blend, not requiring an Inward Processing license, the full quantity of the specific Customs warehouse declaration may exceed the quantity of an Inward processing declaration. It could also be that multiple Inward processing declarations are discharged by the same Customs warehouse declaration. Below an example of the Bill of discharge screen.
